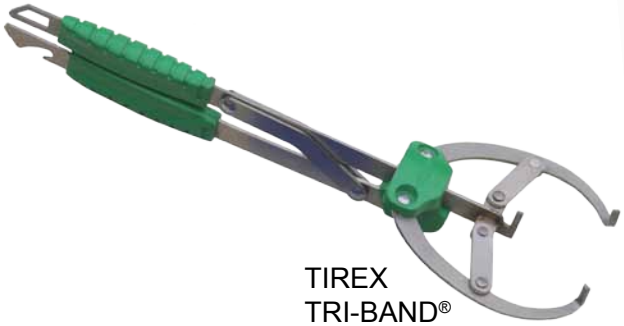
TIREX TRI-BAND™ & TRI-BAND GREEN™ INSTRUCTIONS



TIREX
TRI-BAND®

TRI-BAND
GREEN®

1) Prepare the castrator to apply the ring by lifting the top handle up towards the front end of the castrator causing the three prongs to close together.

2) Place the ring over the three closed prongs and press down around all sides of the ring making sure it is as close to the base of the prongs as possible. It is important to push the ring down, NOT roll it down.

3) Pull the top handle down resulting in the ring being stretched evenly among the three prongs.

4) Grip the scrotum above the two testicles and gently “milk the sack” to separate the fatty tissues so that the band can be applied. This is important so the ring sits tight and cuts of all blood supply and nerves. This ensuring the least amount of discomfort

5) Place the stretched rubber ring as close to the testicles as you can but as far below the belly as possible. When applying the ring, make sure that both testicles are below the band.

6) Pull/flick the top handle up to close the ring around the scrotum, then pull the applicator down from the scrotum to allow the release of the ring. Check before release of the animal that the rings sits nicely and where possible check animals next day in paddock to ensure all is well.

Note: for animals heavier than 180 KG talk to us about the EZE bloodless castrator!
