Beefmaster Classic™

CONCERTINA • HEAVY DUTY • HYDRALOCK EQUIPPED

The Beefmaster Classic is hybrid design with some great features for basic stock handling and weighing needs .

The superior award winning concertina headbail can be operated from the rear and front of the unit, without excessive force or noises common to ratchet headbails.

Good handling starts with the headbail. The headbail is vitally important to safe and efficient handling. Access to the head is improved by it's moon shape design giving you lots of elbow space to work on the head. The more durable

moulded rubber lined yoke restricts head movement in a gentle way when you're injecting, dehorning or drenching.

The size of this TechniPharm® handler is perfect and gives many options on handling stock locked in the headbail or stand freely

If more control is required an anti backing system is available in the top half of the gate.

In terms of value for money ensuring maximum safety in general handling the Beefmaster Classic moves right to the top of TechniPharm's **CATTLE PRO** range.

Our brand guarantee means you can upgrade at any time within 5 years and still get 80% trade in value !
