MIDRANGER CT2000

EQUIPPED WITH HYDRALOCK HEADBAIL

The MidRanger and its all steel robust design make a great and irresistible "priceless" alternative... The MidRanger is a down to earth, budget to function unit for the farmer who prefers the "silent & light" to operate Award Winning Concertina headbail instead of a hard to reach and operate ratchet headbail and wants the basics in a handler.

The MidRanger is built from quality box section steel and high tensile rails on all gates. A full in gate run up backing system for ease of back stopping an animal is built inside the

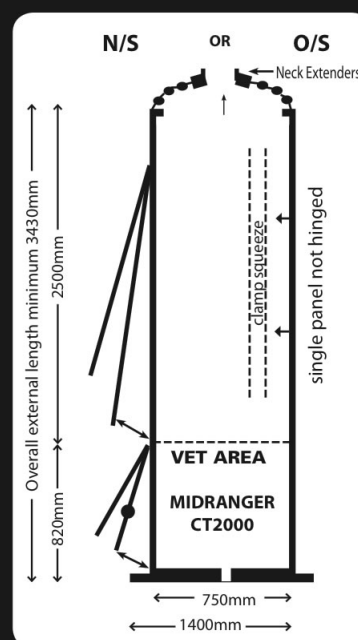

top gate! (Compare this to others who have it on the bottom gate which means you can never use this when you need lower animal access) Heavy duty camlatches on all gates.

Equipped with a single sided parallel clamp squeeze and front and rear operation is also part of this unit, making it easy to operate front or back. The vet gate has an easy access long handle (reach easy) and a solid steel panel.

The sliding gate is a solid steel non climbing design with locking system.

Overall this unit is limited on any specialized features, (for that you should look at the Ultimate Range BeefMaster, Dominator or Extreme). We have just focussed on making the MidRanger robust and simply functional.

A "priceless" alternative to any competitor product, yet with the TechniPharm brand you can be assured of excellent retention value and nation wide company support

MIDRANGER CT2000 FEATURES

- PATENTED & AWARD WINNING HYDRALOCK™ LOCKING** Award winning Hydralock Concertina - Heavy Duty full size - Rubber lined Yoke of which thousands have been sold in NZ and Australia. Hydralock is the quietest and lightest to operate with a clear vision walk through to achieve an excellent flow of cattle. A top headbail and super silent! A popular Allrounder choice that beats any ratchet unit hundred times over! This Headbail is so superior that baulk gates are simply not needed. And if you feel you do you can always get one later All Hydralock headbails are CONCERTINA for faster, easier and smoother headbailing.
- HIGH TENSILE ROUNDED "NON BRUISING" STEEL** Where possible rounded "non bruising" high tensile Kattle Rail is used on gates to reduce bruising.
- SUPERIOR ACCESS TO THE HEAD** The round "moon shape" design means the animal is placed further forward It is also free of any front barrier construction giving you room & access to work the head, eliminating a common problem with flat faced headbail where the animal pulls its head back with ears tight against the headbail and as such you are left the "scramble" for ears or neck.
- SPLIT SIDE DOORS** Side doors split on both sides, hinged from the front with a 2kg. super heavy duty slam-shut camlatch handles
- PATENTED NECK EXTENDERS** brings the head forward which means the neck is extended, there is less sway and as such work much easier & is safer to work on
- ONE PERSON FRONT AND REAR OPERATION**
- FLOOR FIBREGLASS** The super strong never corrode fibreglass floor is a real winner in the unit, lightweight yet super strong and can be cleaned easily.
- GREASE HOLES ENSURE SMOOTH OPERATION** Unlike protruding nipples that inevitably will break off grease holes are "always" greaseable.
- MULTI LUGS WITH UNIT** Multi lugs for weigh bars are standard on this unit.
- HOT DIPPED GALVANISED** is the cheapest form of protection coating, only our top of the range are Zinc Shield coated.
- SOLID STEEL PANELS** Robust and solid unit by use of 75/50 RHS 4mm and 50/50 RHS and non bruising Kattle rail. All gates have solid steel panels for optimum strength and durability which do not break as wooden panels can do.
- DOUBLE HYDRALOCK PARALLEL SQUEEZE** The 1 handle NO noise double sided Hydralock squeeze reduces the width of the animal compartment to adjust.
- INSPECTION GATES** Great for pour on work, scanning or any top half of the animal access work. Two gates in the top gate on the operational side
- SIDE DOORS FULLY STEEL SHEETED** Side doors split on both sides, hinged from the front and fully steel sheeted for optimum strength.
- VET FACILITY** Makes Preg. Testing without headbailing a breeze. Your Vet will charge less because he gets the job done faster and in safety
- PARALLEL CLAMP SQUEEZE** This single sided, one size gate squeeze on the non operating side is ideal for that extra bit of control and is far superior to a bayonet squeeze.
- PATENTED INJECTAGATE** This Patented InjectaGate gives you superior front neck access. Think OSH be safe.
- NON OPERATION SIDE DRAFTING** Best animal draw and flow is achieved by straight out of headbail drafting through a 3 way drafter. But if you can't an opposite handling side draft system can be custom made for you. Closing and opening all from operation side
- FULL WALK THROUGH VET ACCESS** The bottom door of the split vet gate is easy to close behind the animal for safety. It has split gates on both sides with a slam shut, long handle camlatch.
- PERFECT COMPARTMENT LENGTH** You'll handle and weigh faster, Preg test without having to headbail the animal plus you won't run out of reach while vetting cows. Don't be talked into the extra length...it's not needed.
- SOLID REAR DOOR WITH SAFETY LATCH LOCK** It's "non ladder" design eliminates climbing against the door when shut. The marine grade rollers and the nice long handle guarantees you an easy grip & smooth operation for many years.
- GATES ALWAYS SWING EASY YEAR AFTER YEAR** Hinge pins are out, 75x50 RHS Steel Mainframe top and bottom with pipe over square hinging is in, why? Because this gives a solid full length support that unlike pinned hinges will not sag or come off.
- ANTI BACKING SYSTEM** Gives extra restraint during castration, hoofwork etc. Uniquely built in the TOP gate which allows you to use the bottom gate for access to the lower half of the animal for calf feeding or other inspection work.
